#### **BOOKLET A**

28 Questions

28 Marks

Total Time For Booklet A and B: 1 hour 50 minutes

#### **INSTRUCTIONS TO CANDIDATES**

- 1 Do not open the booklet until you are told to do so.
- 2 Follow all instructions carefully.
- 3 Answer all questions.

This paper consists of 9 printed pages (inclusive of cover page)

For each question from 1 to 10, four options are given. One of them is the correct answer. Make your choice (1, 2, 3 or 4) and shade your answer on the Optical Answer Sheet.

(10 marks)

A turtle was spotted laying eggs at a sandy beach in East Coast Park by a member of the public on 23 August 2017. While hatchlings have been regularly seen, it is rare to see a turtle laying eggs in Singapore. The 141 eggs laid by the critically endangered hawksbill (16) turtle have been moved to a safer location with less human activity and low light pollution.

The locations of the original and new sites are being kept under wraps by the National Parks Board (NParks) to avoid disturbances.

"Based on factors such as the amount of light pollution and foot traffic, NParks (18) (19) assessed that the <u>original</u> site posed a high risk to the nest. We will continue to <u>monitor</u> (20) the eggs," said Dr Karenne Tun, a director at NParks who does research on the <u>diversity</u> of flora and fauna in Singapore. Members of the public are reminded that, if they ever sight a turtle, they should keep their distance from it and speak softly.

# **Amazing Science Land**

Address: 23 Neo Theresa Road, Singapore 123987

Opening Hours: 2 p.m. to 9 p.m. daily, except on weekends and public holidays when it is open from 10 a.m. to 10p.m.

Admission Fees: Free for those already receiving financial assistance in school. For others, please contribute any amount.

Station 1: Super Heroes and Heroines

The science behind the tricks and stunts you see on screen

Station 2: Plant Zone

We change the activities at our place at least once a year so that those who have come before may come again to enjoy themselves!

Station 3: Animals and other living things

> Station 4: Mind and Body

Station 7: Relationship between Maths and Science

Station 8:

Climate Change

Station 5:
Space Exploration
Learn about outer space

Amazing Science Land is a registered non-profit organisation. We make our operations lean and channel any profits back to the cause.

## Only from November 2017 to January 2018:

Free goody bags for visitors from 6 to 16 years old

- 1. Get an Activity Sheet at the entrance.
- Sheet has questions for each station.

  Answer the questions when you go to at least three stations.
- 3. Submit your Activity Sheet at the entrance/exit in exchange for a goody bag.

Goody bags may vary in contents and may include balls, educational toys such as blocks, books, and/or sustenance items such as food and drinks.

## The Tale Behind Amazing Science Land

The founders (Robert Tok, Chris Wong and Tan Shun Ming) of this theme park, Amazing Science Land, are friends who grew up in the same neighbourhood when they were young. While Robert had few unmet needs while growing up as his father was the village chief and also owned some profitable businesses, Chris and Shun struggled through their childhood and experienced poverty. Chris and Shun Ming resolved to have the means to help others like themselves. Hence, they studied hard as children and worked diligently as young adults. Gradually, they earned more and also saved more of what they earned. As a child, Robert noticed that many of his friends could not afford what he could, so he gave some of his educational toys and books to them. When he was older, he decided to contribute to society on a larger scale.

In their late teenage years, they had the idea of creating 'Amazing Science Land' for children and youths who would usually not be able to afford the admission fee to a theme park. By raising funds in creative and entrepreneurial ways as students, they started Amazing Science Land. Now, as working adults, they continue to keep it running.

How do they receive enough funds to keep it running? The three friends said, "People have been generous. As this is a non-profit organisation, we did not keep the excess money received from admission fees and donations for personal use but paid the staff only enough. We plowed the excess back into the cause. A generous person will be blessed; and one who blesses others will be blessed with the joy of knowing that he or she has helped someone. Therefore, even though visitors can pay any amount they wish, we trust that people will not take advantage of the system. On our part, we will continue to make 'Amazing Science Land' fun and educational."

What is next? "By next year, we plan to have more facilities for the physically challenged or disabled, or perhaps integrate activities for the elderly who can also volunteer to man the stations."

For each question from 21 to 28, four options are given. One of them is the correct answer. Make your choice (1, 2, 3 or 4) and shade your answer on the Optical Answer Sheet.

(8 marks)

- 21 What is the main aim of the poster?
  - (1) to attract visitors to Amazing Science Land
  - (2) to attract only volunteers who can pay anything
  - (3) to promote topics in Science to the general population
  - (4) to promote the true tale of the founders of Amazing Science Land
- Bearing in mind the main objective of Amazing Science Land, which item in the goody bag is different in purpose from the rest?
  - (1) toy
  - (2) drink
  - (3) book
  - (4) block
- The word 'HURRYI' in the star is in capital letters and has an exclamation mark. What is the best explanation for this hurry?
  - (1) Free goody bags are given out only during a certain period.
  - (2) The stations will vary their contents for visitors of different ages.
  - (3) There are limited stocks of free activity sheets and if you arrive late on the day you visit, you may not get one.
  - (4) The free goody bags will be given out on a first-come-first-served basis at the time of entrance into Amazing Science Land daily.
- Dana wishes to study bacteria. He also wishes to use equipment to look at physical objects that are far away. Which two stations should he visit?
  - (1) Station 1 and Station 5
  - (2) Station 3 and Station 5
  - (3) Station 1 and Station 7
  - (4) Station 3 and Station 7
- Jen and Rania are going to Amazing Science Land in November 2017. Which of the following is <u>not</u> true?
  - (1) Admission is free for students who need financial aid.
  - (2) They are friends who grew up in the same neighbourhood.
  - (3) At Station 8, they can learn more about environmental issues.
  - (4) They can enter the theme park at 10.30 a.m. on a Saturday or Sunday.

- 26 The phrase "the cause" appears twice in the poster. In the grey box at the bottom of the poster and also in 'The Tale Behind Amazing Science Land', the 'cause' refers to (1) encouraging everyone to be generous (2) helping in the advancement of Science calculation of the profits and proper payment of the staff in Amazing Science (3)Land providing the less well-off children and youths with chances to enjoy (4) themselves while learning something at the theme park According to 'The Tale Behind Amazing Science Land', the founders said, "... we 27 trust that people will not take advantage of the system." In this context, they mean that they trust that those who bless others will survive (1) people will not just say that the place is not fun (2) (3) visitors to Amazing Science Land will go through the stations properly visitors will pay admission fees of a reasonable amount if they can afford it
- 28 Based on the poster, which of the following is true about Amazing Science Land?
  - (1) A visitor in 2019 will enjoy exactly the same activities as in 2017.
  - (2) Transportation there is free for those already receiving financial assistance in school.
  - (3) The founders used to be children with very similar socio-economic backgrounds.
  - (4) The founders express their belief in people's generosity as the theme park has received sufficient money from fees and donations to keep it running.

2017 ACS(J) P5 EL SA2

What is salt? Salt is an which has long been considered to be (51)
magical. In ancient Rome, it was so regarded that soldiers would (52)
exchange part of their salary salt. (53)
the invention of the refrigerator, salt was of the of the (54)
few ways of preserving food for it to be for consumption. It is known that a (56)
smallof salt is vital for our bodies toproperly.  (57) (58)
However, in today's culture which is hooked on convenience and processed food produces,
ninety percent of the world's is heavily overdosing on salt – a fact which (59)
they are probably not even of. (60)
A food research company based in the United Kingdom reported that
food such as sausages and baked beans are saltier than they were 25 (61)
years ago. The recommended maximum daily of salt for an adult is 5 to (62)
6 grammes; however, many people consume an amount which what is (63)
recommended. This results insuch as high blood pressure, strokes and (64)
heart attacks. Perhaps this is the rationale behind the phrase "to be taken with a
of salt". Consuming too much salt has proven to be harmful to oneself.  (65)
Adapted from Daily Dose by Adeline Toh

For each of the questions 66 to 70, rewrite the given sentence(s) using the word(s) provided. Your answer must be in one sentence. The meaning of your sentence must be the same as the meaning of the given sentence(s). (10 marks)

The atomic reactor is a fascinating device which is heavily relied upon during crime investigations. It is used to detect chemicals in pieces of evidence, especially when finding traces of arsenic in human hair. Arsenic is a harmful chemical found naturality in soil, water and air. If a person is poisoned with arsenic, tiny amounts of this are deposited in the hair root. These deposits 5 stay and move with the hair as it grows.

It was 1958. A forty-five year old woman had been suffering from a mysterious illness for the entire year. The doctors handling her case were baffled as they did not know how to treat her illness. The woman had been complaining of severe discomfort since the beginning of that year, down with 10 a peculiar illness that weakened her gradually. She was admitted to the hospital twice. However, her doctors could not find out what was wrong with the woman. No medicine that they prescribed could help her, and she was vomiting and had severe muscle cramps.

Out of desperation, her doctors sought the help of some scientists whom detectives worked closely with during crime investigations. The examinations of these scientists unveiled a startling discovery – she was suffering from arsenic poisoning! These scientists had used the atomic reactor to run tests on the woman's hair. The strand of hair selected was long enough to show ten months' growth. Oddly, the scientists found large amounts of 20 arsenic only in some sections of that strand. Knowing how fast hair grows, they were able to show that the arsenic got there when the woman was mysteriously ill at home. The arsenic leves dropped when she stayed at the hospital. It looked as though she had been poisoned at home over a period of time.

The detectives were informed. They headed for the woman's house at 25 once. They found several containers but one contained her medication and it was wrapped in a white cloth, hidden under the kitchen sink. A deep frown creased the detectives' foreheads. They opened the container and found traces of blue-green arsenic powder. They also searched the car that was in the garage. There, the detectives found more arsenic powder. Where could all 30 this arsenic powder come from? All clues pointed to the local farm. It was the only known place in town where plenty of arsenic was made available. It was used to poison the rats, which were pests, there.
