For each question from 16 to 20, choose the word(s) closest in meaning to the underlined word(s). Shade your answer (1, 2, 3 or 4) on the Optical Answer Sheet (OAS). (5 X 1 mark)

Kevin and his friends decided to report their find to the police. The field was soon swarming with policemen and the bomb disposal unit from (16)
the army. Kevin and his friends crowded around the police cordon (17)
curiously as the army personnel moved forward to defuse the bomb. They saw two men clad in protective gear walking slowly towards the bomb. One was carrying a bulky box by his side and the other was digging around the bomb very cautiously. Upon seeing their extreme caution, Kevin felt an involuntary shudder as moments before he had examined the bomb so (19)
casually and flippantly. He realized that such a find was no laughing matter.

Go Nuts!

A Handful of Nuts is Good for your Bones and Improves your Memory!

The Good Nuts

Almonds

- Calcium-rich
- High in vitamin E, a nutrient which helps to improve the condition and appearance of your skin

Cashews

- Provide a good level of protein
- A source of minerals like iron and zinc

The "Nut" Case

The Peanut

While "nut" is in their name, peanuts are in fact legumes. Peanuts actually grow underground, as opposed to nuts that grow on trees. The hard shell nut typically has one or two seeds and they would not split open to scatter their seeds when matured. On the other hand, the peanut has multiple seeds found in a single legume and possesses a soft shell which splits easily to scatter its seeds when matured.

I AM NOT NUTS ABOUT

Peanut butter and jelly sandwiches are a favourite of children everywhere. However, almost one-third of schools have gone "peanut-free" to accommodate the growing number of children who suffer from severe peanut allergies. Worried about not being able to enjoy your favourite bread spread? Consumer Reports say fear not!

There are a lot of other *nul butters* on the market today and most can be safely brought into a peanut-free school. Like peanut butter, *cashew and almond-based spreads* are a great source of protein and help keep your child full for a longer period of time.

To give nut butters a creamy texture, some nut manufacturers add just a little palm oil. These nut spreads basically contain just wholesome nuts with fewer added ingredients. Consumers also find that they are healthier and taste better.

If along with being peanut-free, your child's school is also "nut-free," you might try a sunflower seed-based butter. Consumer Reports recommends Sunbutter Natural Sunflower Spread and Trader Joe's Sunflower Seed Butter. They taste just like peanut butter and are excellent substitutes!

The above news article was adapted from the website: http://www.newschannel5.com/.

I LOVE COOKING WITH NUTS

Do check out this website: https://www.lifeandstyle/best-nuts-recipes.com/ for ten inventive nut recipes. You can also refer to other websites for more information.

It is time to gather up those half-eaten packets and put some crunch in your cooking!

		uestion from 21 to 28, shade your answer (1, 2, 3 or 4) on the Optical eet (OAS). (8 marks)
21.	The	main purpose of the flyer is to
	(1)	point out that a peanut is not a nut
	(2)	promote the benefits of eating nuts
	(3)	discourage people from eating more than a handful of nuts
	(4).	increase the awareness of people suffering from food allergies
22.	A ve	getarian who has an iron deficiency can eat more to supplement his/her diet.
	(1)	almonds
	- •	peanuts
		cashews
	(4)	sunflower seeds
23,	A pe	eanut is <u>not</u> considered a nut as
	(1)	it grows on trees
	(2)	it resembles a pea
	(3)	it is not a source of minerals
	(4)	its shell breaks easily to scatter its seeds
24.		poster contains some phrases like "Go Nuts", "The 'Nut' Case" and not NUTS about peanuts". What is the writer's purpose of using n?
	(1)	to shock the readers
	(2)	to add some humour to the text
	(3)	to show the benefits of eating nuts
	(4)	to discourage readers from eating nuts
25.	Wh	y have some schools gone "peanut-free"?
	(1)	Many pupils are choosy eaters.
	(2)	Many pupils are allergic to peanuts.
	(3)	The pupils prefer to have other spreads.
	(4)	The peanut butter spreads are too creamy.
	• /	• • • • • • • • • • • • • • • • • • • •

- 26. Why do consumers nowadays prefer cashew spreads to the peanut butter spread?
 - (1) They have more varieties.
 - (2) They are a better source of protein.
 - (3) They are easier to spread on the bread.
 - (4) They taste better as they are packed with nuts.
- 27. What can one conclude from the news article?
 - (1) There are more options available for people who are allergic to peanuts.
 - (2) Peanut companies do not add palm oil to their spreads to make them creamy.
 - (3) Peanut butter companies are innovative and sensitive to their customers' needs.
 - (4) All schools are encouraged to go "peanut free" to suit the growing number of pupils who are allergic to peanuts.
- 28. Which of the following statements is **CORRECT**?
 - (1) One of the ways to put crunch in one's cooking is to add nuts.
 - (2) Only good cooks have special access to the website listed on the poster.
 - (3) One must ensure that one has half-eaten packets of nuts before one can start cooking with them.
 - (4) There is only one website available for web users interested to get more information about inventive nut recipes.

BLANK PAGE

We had now reached the starting point of our journey across the desert. Ahead lay a journey of 600 kilometres, across huge dunes of sands, in temperatures that could soar to 50 degrees during the day, and drop to 7 degrees at night. Nothing stirred, not even a lizard. I had heard terrible recounts of travellers returning from the desert sands. Their lips were blackened and bleeding. They spoke of the extreme heat they had endured, and of the agonising thirst they had suffered. I had heard tales of how others had become walking skeletons of men.

That evening, I discussed the journey with my companions. Abu was our leader, an experienced guide who had travelled through the desert two years earlier. Our limited food supply was the main problem. My companions had been too generous in giving away food to travellers we had met on our way to the desert. A month's journey lay ahead of us. That would mean we could only have a quarter of a kilogram of flour for each man per day. We could only carry a supply of water for the five of us for twenty days. That meant the camels would have to go without water throughout that time. Twenty days was the most they could go without water. After that, we would have to start looking for wells. If we did not find any, the camels would collapse. My companions claimed that it was not their own hunger or thirst that they feared but it was the collapse of the camels they feared most. It this happened, we could never make it through the desert alive.

The next morning, we loaded up the animals and started our journey across the desert. It was not long before we encountered the first of the hills of sand, some of which rose 150 metres above the desert floor. We made our way slowly up one of them, with Abu finding a path for the leading camel which was carrying the largest of our water skins. Going down the other side, this leading camel hesitated and veered off track. Its head-rope attached to the bull camel following behind tightened. As it grew tighter, the rope pulled the leading camel over to one side.

Because I was following behind, I could see what was going to happen. I shouted frantically to Abu, who was now further down the slope. He was unable to stop the carnel on the steep slope. The carnel collapsed on top of the water skins, squashing them beneath her. Immediately, Abu was slashing at the head-rope to prevent it from tightening further over its head. If the water skins had burst, our journey across the desert was as good as over. The fallen carnel struggled to its knees. The water skins on its back still seemed to be

After inspecting them, Abu said, "They are alright!" We loaded them on to the bull carnel which was behind it, believing that the bull carnel would be stronger to carry the water skins.

35

Day after day, we struggled and spent hours climbing great mountains of sand. One evening, when we stopped for our meal, we checked the precious contents of our water skins. There had been a regular and alarming drip from the skins throughout the day. It was like the dangerous loss of blood from a wound that could not be closed. Although we longed for sleep, we had to press on before we ran out of water. After riding for another two hours, we were shivering uncontrollably in the cold night air. We longed for a hot drink, but we knew that we had to resist the temptation as we had already used up our ration of water for that day. Finally, we stopped for the night. Yet, we slept little, for our thirst never left us, and we were worried about our precious water dripping away onto the sand.
