Ai Tong School Primary 5 Science 2022 Term 1 Weighted Assessment

Nam	1e:		. (}	Date:	and the second second	-
Clas	s: P5		_		Duration: 30 n	ninutes	
Sec	tion A	(8 marks)					
For Mak	each d e your	question from 1 to 4, four options a choice (1, 2, 3 or 4) and write your	re gh ansv	ven. One of twee in the bra	them is the correct icket provided.	; answer.	•
1	Whic	ch of the following statements about	t cells	s is correct?			
	(1) (2) (3) (4)	Cells can be seen with the naked Cells have-fixed shapes and structure Cells are unable to reproduce on the Cells are able to react to changes	tures their	own.	nt.	(}
2	The	diagram shows two flowers from the	a san	ne plant.	:		
	ς.	C B	5				
	Whic	th pair of arrows shows pollination to	aking	place?			
	(1) (2) (3) (4)	A and B only B and C only A and D only C and D only				()
					(Go on to the or	ance tya	. `.

3 In the table below, a tick (</) shows the parts that cells P, Q, R and S have.

	Cell P	Cell Q	Cell R	Cell S
Cytoplasm	1	V	· /	
Cell membrane	(J-38)	1		
Nucleus	*			managangan Sherita ayak Makkatan ada ing d
Cell wall		V	144	
Chloroplasts	1			<u> </u>

Based on the information provided, which statement is correct?

- (1) Cell Q makes its own food.
- (2) Cells P and Q are plant cells.
- (3) Cells R and S are from a plant.
- (4) Cells Q, R and S are from an animal.

()

The diagram below shows the processes involved in the reproduction of a flowering plant.

Which of the following correctly identifies processes A, B and C?

į	Process A	Process B	Process C
(1)	Seed Dispersal	Pollination	Fertilisation
(2)	Seed Dispersal	Fertilisation	Pollination
(3)	Fertilisation	Pollination	Seed Dispersal
(4)	Pollination	Fertillsation	Seed Dispersal

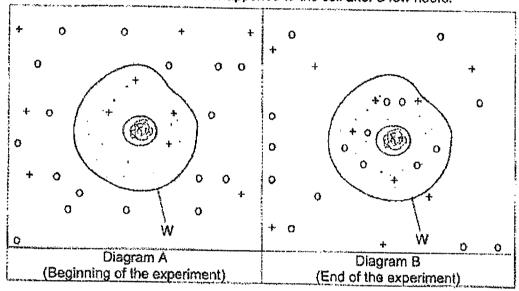

.

Section B (12 marks)

For questions 5 to 8, write your answers in the spaces provided.

The number of marks available is shown in bracket [] at the end of each question or part question.

A cell was placed into a solution at the beginning of the experiment as shown in Diagram A. Diagram B shows what happened to the cell after a few hours.

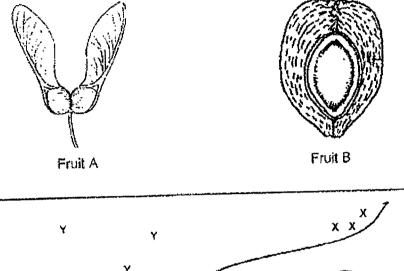

Key	A march & second
4	Substance Y
0	Substance Z

(a)	Does the cell in the diagrams above belong to an animal or plant? Give a
	reason for your answer.

eason for your answer. [1]

(b) Name part W. Based on the experiment, what can you conclude about part W? [2]

The diagram below shows two fruits A and B and the dispersal pattern of Plant X, Y and Z.

(a) Based on the above diagram, how is Plant Z likely to be dispersed? Explain your answer. [1]

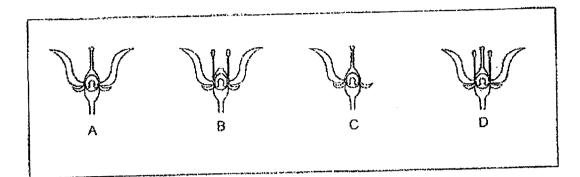

(b) Explain how the structure of Fruit A enables it to be dispersed. [1]

(Go on to the next page)

Δ

(c)	Fruit B has a fibrous husk. Which plant X, Y or Z is likely to pr	oduce Fru	iit B?
	Explain your answer.		[2]
			Antesperature species
		;	

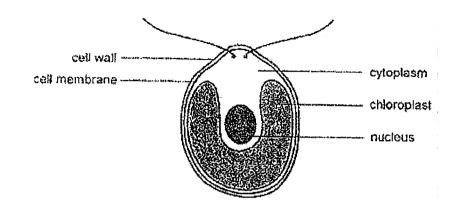

7 The diagram below shows four flowers, A, B, C and D.

(a) Which of the flower(s) can develop into a fruit? [1]

(b) Explain your answer in part (a). [2]

8 The diagram below shows a single-celled organism which lives in pond water.

(a)	Is this single-celled organism a plant or an animal?		[1
			·······
(b)	Give a reason for your answer in part (a) above.	-	{1]

Materials given:

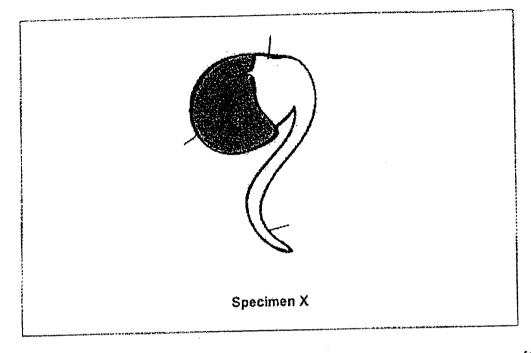

- · cross-section of specimen A
- cross-section of specimen B
- specimen X
- magnifying glass

instructions:

1.	Examine the cross-sections of specimens A and B.
2.	Specimens A and B are fruits. Based on your observation, give a reason why.
3.	Name the method of seed dispersal for specimens A and B.
	Specimen A: Specimen B:
	State one reason for your answer for specimen B in question (3).
•	State one advantage of the method used by specimen A to disperse its seeds.
•	Is specimen A capable of carrying out photosynthesis? Explain your answer.

7. Examine specimen X. Label the seed coat, seed leaf and root in the diagram below.

Primary 5 Science Practical Assessment 2022 Correction Template

Question	Answers	÷	بدن جنجه او در فاداخان بد گنجمها درویسات	And the state of t
Secre Stron	Miswers	and the second of the second of the second	• ····	Remarks
1	% C			Do note that all measurements must include units. When ice is melting, the mixture of ice and water is at 0°C. Heat energy from the surroundings is used to melt the ice instead of increasing temperature of the mixture.
2	The ice cubes are	melting	· ·	THINKET C.
3	Warmer Water vapour from thesurrounding air comes into contact with thecooler outersurface of the beaker, losesheat andcondenses into tiny water droplets on the outer surface of the beaker A.			- Heat source must be identified correctly. - Temperature difference between the surroundings and the condensing surface must be stated. - Heat transfer (heat gain/heat loss must be stated. - Change of state and its process must also be stated. Use mnemonic to help you remember this answering technique.
4	From solid state to liquid state.		Melting is process of heat gain whereby ice changes from the solic state to the liquid state.	
	Object	Gaining heat	Losing heat	Ice cubes in the beaker gain heat from the surrounding air.
	Ice cubes in beaker A Air surrounding beaker A			Air in the surroundings loses heat the ice cubes in the beaker.

	The state of the s	The state of the s
6	room temperature (between 20 °C to 34 °C)	After three hours, there will be no heat transfer between the mixture in the beaker and the surroundings, so the mixture will have reached room temperature.
Activity	, 2	g ser (,) southful with 1
2	Data: Specimen A and B have seeds Explain: and only fruits have seeds.	Use C (given) – D – E in your explanation.
3	Specimen A: splitting / explosive action Specimen B: animal	
4	Specimen B is a fleshly fruit.	Animals will be altracted to feed on fleshy fruits, thereby either throwing away the seeds or swallowing the seeds and eventually passing them out, thus dispersing the seeds away from the parent plant.
5	Does not depend onexternalagentssuch as wind, water and animals for seed dispersal.	
6	Choice: Yes Data: Specimen A isgreen Explain: indicating that it contains chlorophyllthat trapslight to make food for the plant.	Use C - D - E in your explanation

	seed coat
8	a flowering plant a non-flowering plant
