Given:
• Area of B: Area of C = 3:1
 Area of A: Area of D: Area of E = 2:3:1
Step 1:
Let the area of C be x , so the area of B is $3x$.
Step 2:
Let the areas of A, D, and E be $2y$, $3y$, and y respectively.
Step 3:
Express the area of A as a fraction of the area of B:
Since the final answer needs to be in a simplified form and assuming y is proportional to x , the expression simplifies directly:
$rac{ ext{Area of A}}{ ext{Area of B}} = rac{2}{3}$
 This fraction correctly represents the area of A as a fraction of the area of B.
