Each of the underlined words contains either a spelling or grammatical error. Write the correct word in each of the boxes. (10 marks)

Climate change and human activity are enabling the spread of mosquito-borne diseases like malaria and dengue to new areas, raising global health concerns. Warmer temperatures allow these insects to survive in regions that was once too cold. Globally,

(21)

mosquito-borne diseases already threaten the lives of millions, and one billion people are expected to be on risk of contracting the diseases by the end of the century.

Extreme climate and weather patterns such as droughts, heatwaves and floods bring about the presanse of conditions which increase the breeding and survive rates

of mosquitoes. Rising temperatures also extend a length of the mosquito breeding season, leading to a greater occurrence of disease outbrakes.

Human activity worsens the problem. Discarded items like plastic containers collect stagnant water, creating pirfact breeding grounds that mosquitoes can lay

hundreds of eggs in. To reducing the threat of mosquito-borne diseases, the divelopement of effective vaccines and management of waste are crooshe. Addressing

the spread of mosquito-borne diseases requires global cooperation in this warming world.
